

A RIS like no other.

Fujifilm delivers a higher standard in RIS technology. Synapse™ RIS offers a comprehensive list of features to meet the needs of an evolving radiology market including many advanced tools you won't find in competing products. Then, Fujifilm went a step further and added even more – the kind of features you'd expect to pay extra for – features like integrated peer review and critical results notification. Synapse RIS also offers workflow-enhancing technologies such as instant messaging and the ability to create your own digital forms. And because Synapse RIS is from Fujifilm, you can count on continual innovation, seamless integration and, of course, comprehensive service.

The most advanced, most comprehensive, web-based radiology management solution.

We offer a complete RIS with the added power and ease you've come to expect from Synapse.

- Registration
- Scheduling and Order Entry
- Electronic Dashboard
- Mammography Tracking and Reporting
- Transcription
- Radiologist Tools and Electronic Signatures
- Pre-certification Notification
- Eligibility Verification
- Management Reporting (Standard, Custom Builder, ODBC Methods)
- Advanced Scheduling Logic for segmented exams
- Reports and Images from Synapse PACS

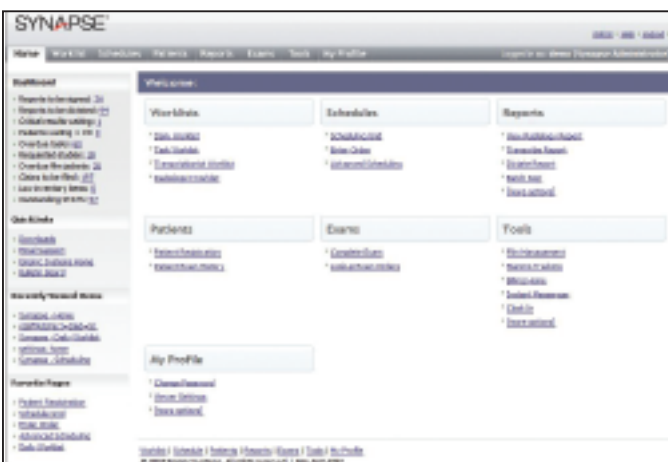

- Automated Email Notifications
- Ability to save reports as PDFs
- Inventory Tracking
- Embedded Digital Dictation
- Document Scanning and Management
- Electronic Signature Pad Integration (ABN and Consent Forms)
- Configurable Billing Export

We've included features that other suppliers would have you pay extra for.

- Referring Physician Portal that includes exam request, scheduling, report and image access
- Radiologist Peer Review to meet ACR guidelines
- Critical Results Notification Worklist to alert and track critical exams, also available from the referring physician portal

This RIS delivers extra productivity.

Synapse goes beyond RIS to give you a complete radiology business management solution. Productivity boosting features such as paperless or "drawable" forms, instant messaging, pre-certification and advanced exam profile scheduling will become an indispensable part of your radiologists' workday. You'll also have a single view of imaging repositories

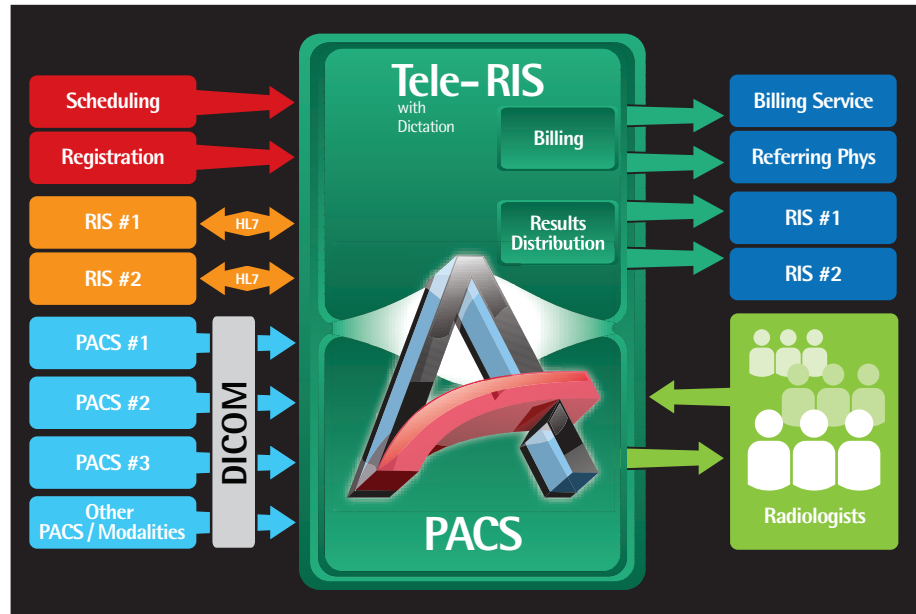

and advanced reporting and tracking with direct access to all data fields. You'll find feature after feature designed to make the difficult work of radiology run smoother.

A RIS and a Teleradiology solution in one.

This system allows you to grow your business and offers the advantages of teleradiology to your physicians without any additional expense or hassle. You'll have access to patient information – anywhere, anytime. Orders can be generated from a DICOM image as well as from HL7 or through web-based remote order entry. And worklist criteria are flexible. They can be filtered on location, by modality, by body part and by assigned radiologist. Our report creation function even allows reports to be sent out with the individual ordering site's letterhead and logo – automatically. When linked with Synapse PACS, there's no more powerful teleradiology solution.

Fujifilm also offers a totally-turnkey, fully-comprehensive managed teleradiology solution. It includes: software, hardware, data center hosting and system management. We get your images and information on the web quickly and securely so you can work anywhere. We'll monitor the system for you, handle upgrades and maintain the hardware. If you'd like, we can also provide disaster recovery services and off-site archiving.

Synapse RIS gives you a hundred and ten percent for a fraction of the price of other RIS products.

You get a true, incredibly-comprehensive, robust RIS no matter if you are a multi-facility enterprise or a small imaging center. And since Fujifilm prices Synapse RIS by exam volume – with unlimited users and sites – it's both a tremendous value and a predictable expense.
